

## Focchi redesigns its IT architecture with the help of a Syneto hyperconverged solution

### Overview

**Company:** Focchi

**Location:** Italy

### The Challenge

- upgrade existing IT with the help of virtualization
- increase application performance (CAD/BMI)
- achieve reliable Disaster Recovery

### The Solution

- **Virtualization** with one-click deployment of applications.
- **Increased performance** for resource-intensive applications.
- **Certain and reliable recovery:** in only 15 minutes.

### Customer Profile

Focchi S.p.A., founded in 1914 in Rimini, is a leading company in the curtain walling sector.

Through its services, the company is engaged in the full architecture cladding process - from design to manufacturing, delivery and on-site installation.

### The Challenge

Focchi was looking for a flexible and modern IT solution, that would offer virtualization and therefore allow the company to optimise their use of resources.

Focchi also needed a solution that would allow them to easily deploy and remove applications, including those used for test environments. Moreover, the new solution needed the ability to accommodate resource-intensive applications, without sacrificing performance.

Last but not least, the company wanted to be prepared against potential IT threats. That is why Focchi was looking for a solution that would offer data protection and reliable Disaster Recovery.

## The Solution

Focchi has chosen a Syneto hyperconverged solution that helped them achieve all their IT goals. The assistance provided by Syneto, the quality of the product and the reliability of the support services were all factors that contributed to the purchase decision.

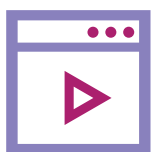

The chosen solution now accommodates the company's resource-intensive applications used for 3D design(CAD and BIM), as well as the company's SQL databases.

The new IT infrastructure also offers complete data protection, with instant automatic backups. Data can be recovered with minimum effort and time thanks to the granular file recovery feature. Deploying, restoring and removing applications is just a one-click operation.

The new VMs created with the help of the Syneto solution outperform the previous physical servers. The company is planning to replace all physical servers with HCI solutions in the near future.

*"We have considered a Syneto solution due to the company's strong expansion in recent years. We needed a flexible solution that would allow us to easily add applications without losing performance and that is now possible thanks to Syneto."*

- **Maurizio Focchi** - CEO, Focchi

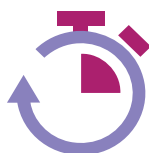

### Virtualization

Deploying applications is just a one-click operation.

### Increased application performance

For all applications, including resource-intensive software.

### Certain and reliable recovery

The infrastructure can be "up and running" within 15 minutes after a disaster occurs.
