syneto

Simplify • Accelerate • Protect

Provincia di Rovigo achieves complete data protection and increases performance with Syneto

Overview

Company: Provincia di Rovigo
Location: Italy

The Challenge

- Ensure complete data protection.
- Improve Disaster Recovery.
- Increase infrastructure performance.

The Solution

- **Automatic backups:** of all the data.
- **Recover everything** in just 15 minutes after a disaster.
- **Improved performance** for all applications

Customer Profile

The Province of Rovigo is an Italian province in the Veneto administrative region.

The public local government of the Province of Rovigo employs around 250 people in its six offices. These offices are located in Rovigo (three of them), Adria, Badia Polesine and Rosolina Mare.

The Challenge

The Province of Rovigo needed to achieve high availability and storage reliability in order to meet their mandatory public disclosure needs. Their virtual machine data and files also needed to be protected and easily recovered in case of an unfortunate downtime event.

Province of Rovigo's IT management also wanted to overcome the low reliability of previous servers which maintained their virtual machine infrastructure and to achieve better scalability for their IT infrastructure.

It was also important for the institution to find a hyperconverged solution that could fit their government mandated budget.

The Solution

The Province of Rovigo deployed two Syneto all-in-one hyperconverged infrastructures with integrated Disaster Recovery capabilities. The two units were deployed as a high-availability cluster, ensuring all data is consistently backed up, while being at all times ready to be served to the public.

The solution has successfully replaced the old unreliable infrastructure and now handles all of the province's all-purpose and specific software (for human resources, financial, web servers etc.) Infrastructure management time has been drastically reduced - the new infrastructure requires less than one hour of maintenance per week.

In addition to low management times, the new infrastructure offers increased performance and safer backups. Thanks to the integrated DR capabilities, all data is constantly backed-up and can be restored in 15 minutes in case of a downtime incident.
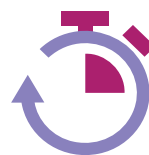

"The new Syneto infrastructure has given us higher working speed, as well as better and safer backup procedures. The infrastructure is very easy to manage and offers good value at a reasonable price."

- **Stefano Salandin, Head of IT** - Provincia di Rovigo

Automatic backups
for all the data (files and applications) on the infrastructure.

Recover everything
in 15 minutes after a disaster or malware attack occurs.

Improved performance
for all the applications that are necessary to the business.
