

## Conf Industries transports its data on a safe IT solution, forgets about downtimes and ensures Disaster Recovery

### Overview

**Company:** Conf Industries

**Location:** Italy

### The Challenge

- consolidate IT
- improve CAD workflow
- achieve Disaster Recovery

### The Solution

- **IT consolidation** on a single Syneto solution
- **Increased performance** for resource-intensive applications
- fast and reliable **Disaster Recovery**

### Customer Profile

Conf Industries is one of the leading manufacturers of warehouse transport systems and aluminum alloy, steel and plastic storage carts. The story of Conf Industries began in 1961 when the company opened its first headquarters in Travagliato, Brescia, Italy.

### The Challenge

Conf Industries designs all their products in a CAD 3d environment prior to production. A Product Data Management for CAD system is used to centralize all the aspect of the design process and manage different CAD project pieces. The company was facing interruptions and delays to the poor integration between the different parts of their infrastructure.

Conf Industries needed to consolidate their IT infrastructure, and solve their performance issues in order to improve their CAD workflow and overall work processes.

With data stored on independent servers and workstations, comprehensive backup operations should ensure an adequate level of data safety with no added complexity and costs.

## The Solution

To eliminate any system instabilities, crashes and delays, Conf Industries acquired a Syneto solution.

In order to achieve true Disaster Recovery, a second Syneto unit was chosen as a backup unit, to receive backups and ensure Disaster Recovery. All of the company's data is now safely backed up, through automatic backups, on both the main unit and the secondary one. Should a disaster occur, the company can recover fast and with

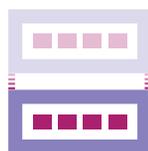

minimum damage.

Company-wide data access speeds have been greatly increased through the operation of IT consolidation.

The VMware integration feature of Syneto was used to virtualize existing servers on the new IT infrastructure. This virtualisation brings some great advantages, chief among them being increased data access speeds (including for PDM software) and greater redundancy.

*"The solution from Antedata, powered by Syneto technology, has allowed us to gain a new level of integration between CAD 3d development, Sales and Marketing. We are very pleased!"*

- **Flavio Ventura** - owner, Conf Industries

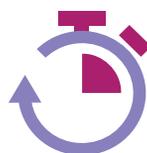

### IT Consolidation

with an infrastructure that is easy to manage and provides virtualisation.

### Increased performance

for all applications, including the company's vital PDM.

### Reliable Disaster Recovery

All data can be recovered within minutes in case of a downtime incident.
