Case study
Shima Seiki
v.1.0/2018

Shima Seiki weaves data protection and Disaster Recovery into their IT

Overview

Company: Shima Seiki

Location: Italy

The Challenge

- achieve complete data protection
- achieve fast Disaster Recovery
- find a solution that is easy to manage

The Solution

- **Instant Backups** of all the company's data.
- **Predictable recovery:** in just 15 minutes after an incident.
- **One-click management:** for app deployment, backup, and recovery.

Customer Profile

Shima Seiki Italy was founded in 2006 and provides various kinds of knitting machines and spare parts to European customers. The products are imported from the Japanese parent-company.

Shima Seiki Italy currently employs 54 people in various departments: commercial, administration, logistics, etc.

The Challenge

Shima Seiki Italy was facing the challenge of having to replace an obsolete IT infrastructure in one of their branch offices. This old infrastructure no longer met the company's space and performance requirements and provided very little data protection. The company faced the risk of losing a great amount of data in case of a malfunction or malware infection.

The company had decided to find a solution that would cover their storage and performance needs, while consolidating their servers and helping them achieve reliable Disaster Recovery.

The new IT infrastructure would also have to be easy to deploy and manage, as infrastructure maintenance would be the responsibility of just one person.

The Solution

Shima Seiki Italy has chosen a Syneto HYPERSeries to solve the IT challenges they were facing. The solution consists of two units: one primary unit located in the branch office and a secondary Disaster Recovery unit located in the company's headquarters.

The solution has solved the company's storage needs while offering increased application performance. The Syneto solution now successfully runs and protects all the company's files and applications,

including the very important sales management software.

The company's data is automatically backed-up in the main office and, should a disaster ever occur, the data can be recovered in just 15 minutes.

The solution has also saved Shima Seiki Italy a great amount of time, as it requires low management times and a team of one is sufficient to handle infrastructure maintenance.

"We chose Syneto because the solution was both easy to use and reliable. The solution meets our needs and allows us to have all our VMs on a machine with top performance."

- **Marco Manzotti** - ICT Manager, Shima Seiki Italy

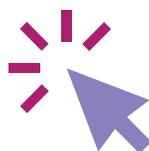

Instant automatic backups

of all the data (files and applications) on the infrastructure.

Fast recovery

The infrastructure can be "up and running" in 15 minutes after a disaster occurs.

One-click management

Deploy applications, create backups, restore and recover data with just one click.
