WALLEY DESIGN

Walley Design re-design their IT with a new Syneto infrastructure

Overview

Company: Walley Design
Location: Italy

The Challenge

- ensure data integrity and data protection
- increase application performance (CAD 2D/3D)
- achieve reliable Disaster Recovery

The Solution

- **Instant Backups** of all the company's data.
- **Increased performance** for resource-intensive applications.
- **Certain and reliable recovery:** in 15 minutes.

Customer Profile

Walley Design, founded in 1974, is an Italian engineering company that offers feasibility studies, supply assistance, industrial assistance, basic and detailed engineering services.

Walley Design serves the needs of customers from various sectors like oil and gas, chemical and petrochemical, pharmaceutical, industrial plants etc.

The Challenge

Walley Design was looking for a new IT infrastructure that would be well-adapted to the general needs and budgets of SMBs.

The company wanted to protect all their important project data and make sure that the data is easy to recover in case of a downtime incident. It is important for the company to be able to minimize downtime in case of any kind of incident so that the activity of the business is not halted.

The solution would also have to be appropriate for running resource-intensive applications like CAD (2D/3D), PDM software and structural calculus software - all of which are vital for the business.

The Solution

Walley Design has chosen a Syneto hyperconverged solution which uses VMware ESXi as a hypervisor. This offers next-generation technology at a price that is reasonable for SMBs. The Syneto solution has been designed to meet the IT needs of small and medium businesses, making it the perfect choice for Walley Design.

The chosen solution has proven to be both stable and reliable. It has solved the company's data protection and application performance needs. It now successfully runs all of the company's applications and protects all of the company's data.

Syneto's hyperconverged solution offers a reliable RTO: all the data can be recovered in just 15 minutes after an incident. Moreover, it offers an RPO of just 1 minute, which ensures that data loss is truly minimized.

As the solution offers "1-click management", the IT team at Walley Design has to invest very little time in IT management.

"We chose Syneto due to the solution's overall stability and performance, but also due to the replication system - it reduces backup times and increases security thanks to its retention capabilities and recovery times."
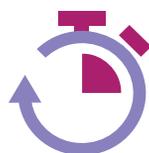

- **Roberto Rambaldini** - CEO, Walley Design

Instant automatic backups
Of all the data (files and applications) on the infrastructure.

Increased application performance
For all applications, including resource-intensive software like CAD.

Certain and reliable recovery
The infrastructure can be "up and running" in 15 minutes after a disaster occurs.

syneto

Simplify • Accelerate • Protect

Syneto creates technologies which Simplify, Accelerate and Protect IT operations. We take the latest, cutting-edge enterprise IT technologies and combine them with an incredible level of management simplicity and operational agility to deliver uncompromising simplicity, speed and security. A demonstration of how smart IT can be.
